DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19 have been allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest a system comprising a mobile node, a first and second packet switching node and its method of performing handover in a mobile communication system comprising a mobile node, a first and a second packet switching node. In the method handover condition associated with the mobile node is detected in the first packet switching node; the first packet switching node requests handover preparation from the second packet switching node; logical link layer information is received from the first packet switching node to the second packet switching node; the state in a logical link layer entity is set in the second packet switching node based on the logical link layer state information; and logical link layer frames are sent from the first and second packet switching nodes to the mobile node during handover as in claim 1, and similarly in claims 3, 6, 9, and 12-19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Vialen et al., Einola et al., Boudreaux, and Schieder (PTO-892 attached) disclose systems of performing packet switching handover but not based on the logical link layer state information.
